

## Supplementary Material

**Article Title:** Associations of Valproate Doses With Weight Gain in Adult Psychiatric Patients: A 1-Year Prospective Cohort Study

**Authors:** Claire Grosu, MSc; William Hatoum, PharmD; Marianna Piras, PharmD; Nermine Laaboub, PhD; Setareh Ranjbar, PhD; Franziska Gamma, MD, MSc; Kerstin J. Plessen, PhD; Armin von Gunten, MPhil, MD; Martin Preisig, MD, MPH; Philippe Conus, MD; and Chin B. Eap, PhD

**DOI Number:** 10.4088/JCP.23m15008

### LIST OF SUPPLEMENTARY MATERIAL FOR THE ARTICLE

1. [Table 1](#) Comedications Taken by the Participants
2. [Table 2](#) Logistic Regression
3. [Figure 1](#) Flowchart of the Selection of Patients
4. [Figure 2](#) Scatter Plot of the Correlation Between Valproate Doses (mg/Day) and Weight Gain (%)
5. [Figure 3](#) Scatter Plot of the Correlation Between Valproate Doses (mg/Day) and Weight Gain (%), Excluding Patients Who Received Doses Greater Than 2000 mg/Day (N=22, 10% of the Cohort)

### DISCLAIMER

This Supplementary Material has been provided by the author(s) as an enhancement to the published article. It has been approved by peer review; however, it has undergone neither editing nor formatting by in-house editorial staff. The material is presented in the manner supplied by the author.

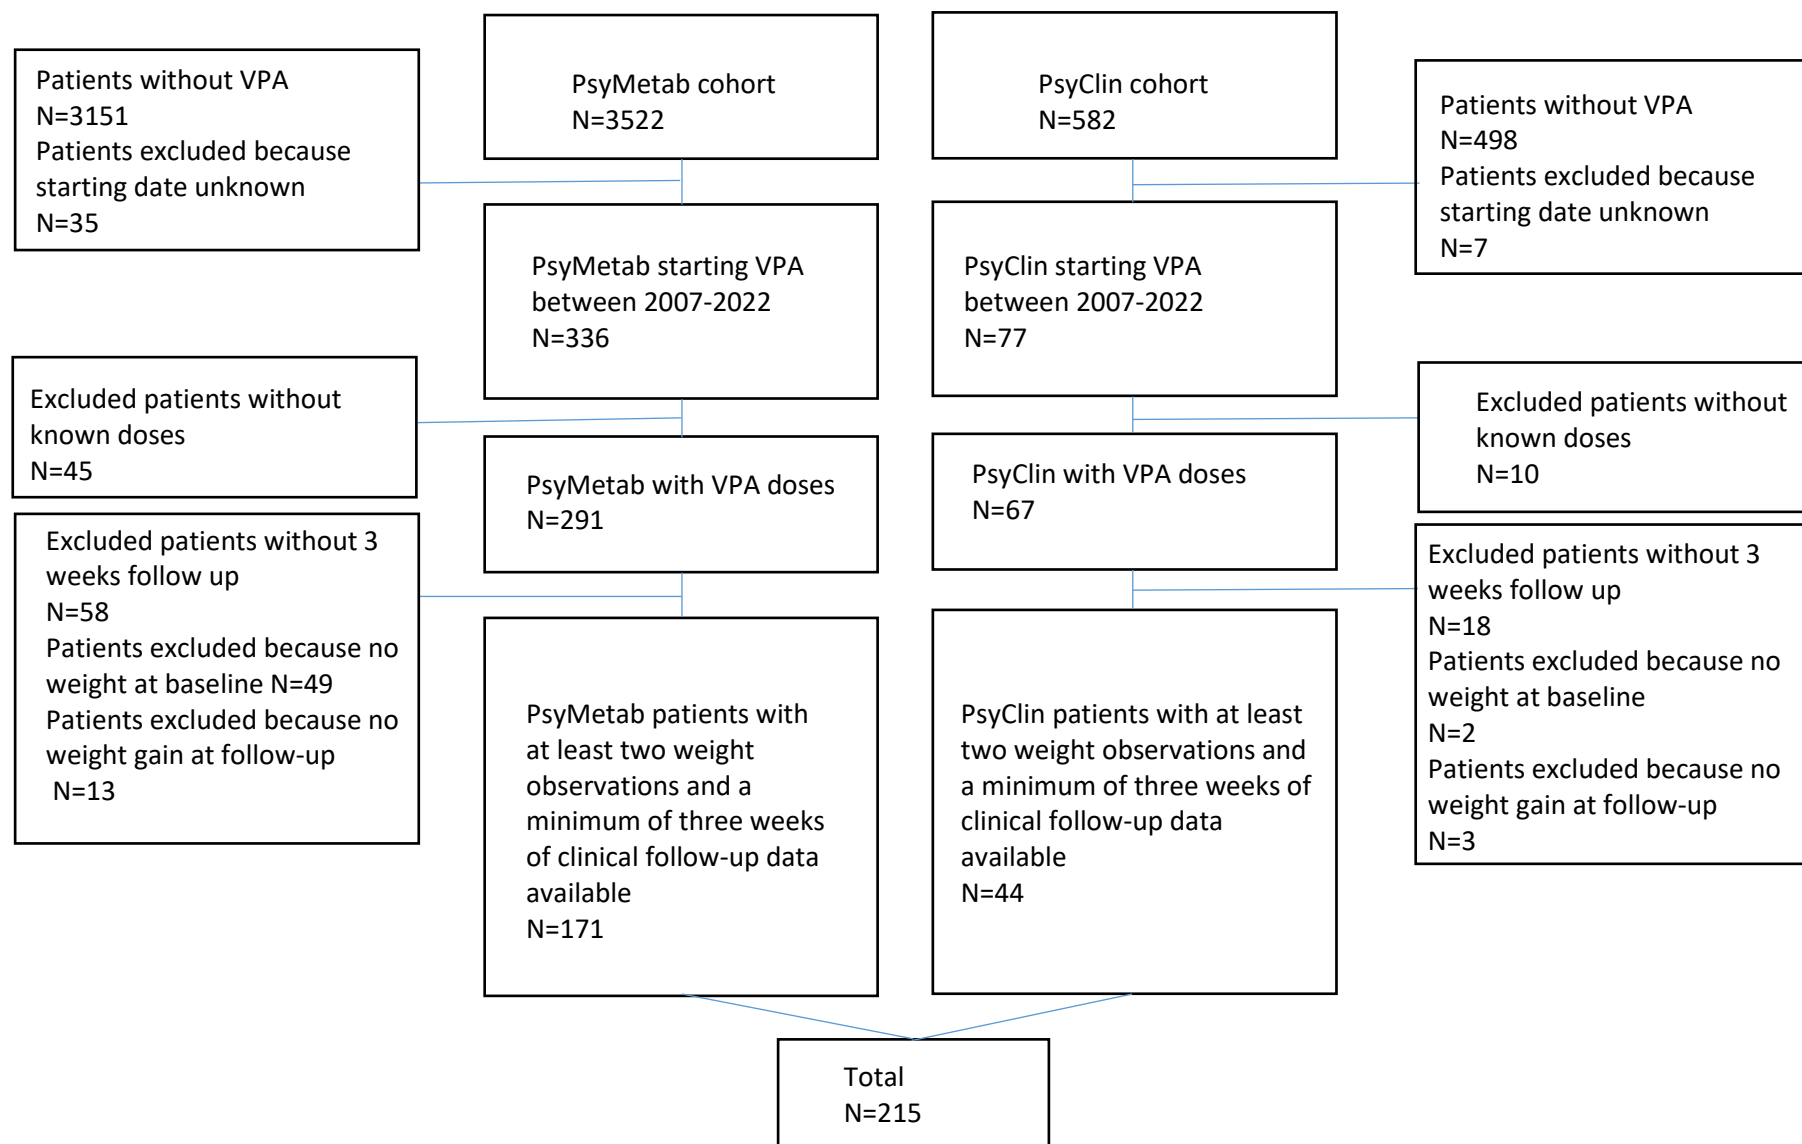

**Supplementary Table 1:** Comedications taken by the participants

Antidepressants	Benzodiazepines	Lipid-lowering drugs	Antidiabetics	Antihypertensives	Weight-inducing psychotropic drugs
Citalopram Duloxetine Escitalopram Fluoxetine Fluvoxamine Moclobemide Paroxetine Reboxetine Sertraline Trazodone Venlafaxine	Alprazolam Bromazepam Clobazam Clorazepate Diazepam Flurazepam Lorazepam Lormetazepam Midazolam Oxazepam Triazolam	Atorvastatin Rosuvastatin Simvastatin	Gliclazide Insulin Insulin aspart Insulin degludec Insulin glargine Insulin lispro Liraglutide Metformin Repaglinide Sitagliptin	Amlodipine Bisoprolol Candesartan Diltiazem Enalapril Furosemide Glyceryl trinitrate Hydrochlorothiazide Indapamide Irbesartan Lercanidipine Lisinopril Losartan Metoprolol Modamide Nifedipine Perindopril Spironolactone Torasemide Verapamil	Amisulpride Amitriptyline Aripiprazole Asenapine Chlorprothixene Clozapine Flupentixol Haloperidol Levomepromazine Lithium Lurasidone Mirtazapine Olanzapine Paliperidone Pipamperone Quetiapine Risperidone Sertindole Zuclopenthixol

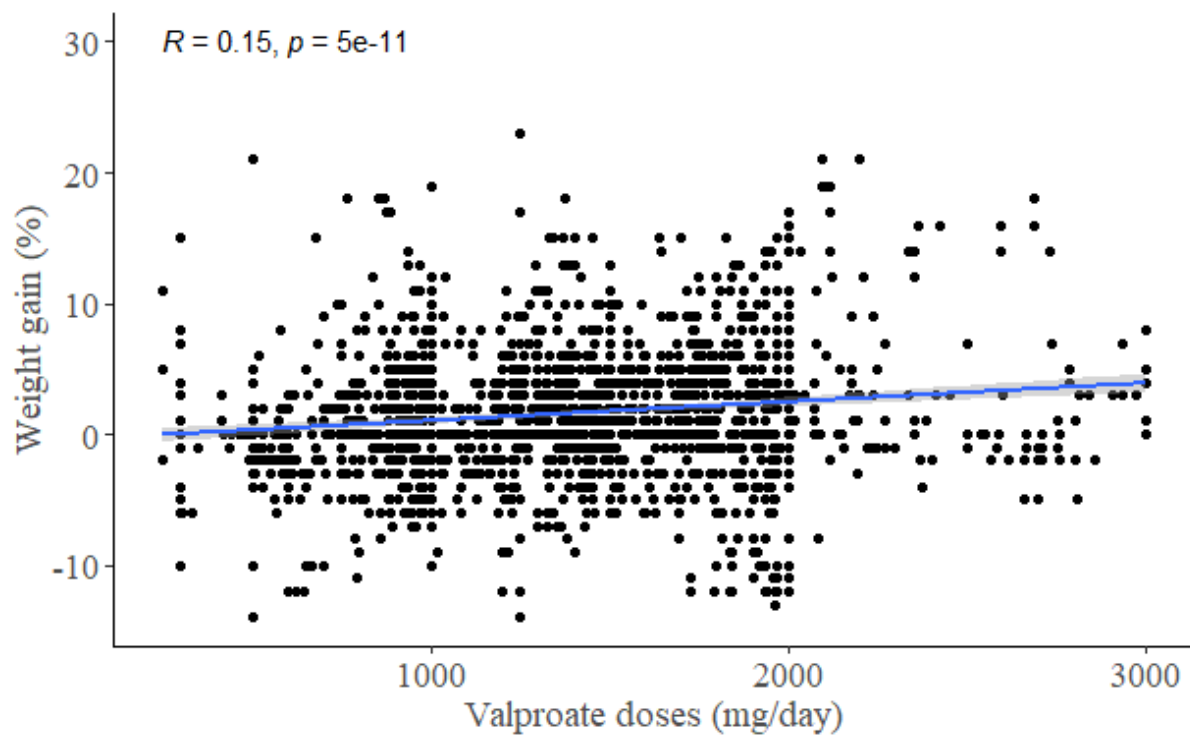

**Supplementary Table 2.** Logistic regression<sup>a</sup>

Weight gain $\geq 5\%$ in 1 month				Weight gain $\geq 7\%$ in 1 year		
Variables	Odds ratio	95%CI	P	Odds ratio	95%CI	P
Mean dose <sup>b</sup>	1.49	0.99 to 2.27	0.06	1.21	0.84 to 1.76	0.30
Max dose <sup>b</sup>	1.62	1.11 to 2.41	<b>0.015</b>	1.31	0.94 to 1.83	0.12
N patients	196					
<i><sup>a</sup>Logistic regression on the occurrence of <math>\geq 5\%</math> weight gain within the first month of treatment and on the development of <math>\geq 7\%</math> weight gain within the following year. The models were adjusted for age, sex, baseline BMI, smoking status, diagnostic and psychotropic comedication risks.</i>						
<i><sup>b</sup>Mean dose (mg/day) reflects the average value of dose received during the first month of treatment (weight gain <math>\geq 5\%</math>) and within 12 months (weight gain <math>\geq 7\%</math>), and max dose (mg/day) represents the maximum value.</i>						
<i>Abbreviations: CI: confidence interval, N: number.</i>						

**Supplementary Figure 1.** Flowchart of the selection of patients

**Supplementary Figure 2.** Scatter plot of the correlation between valproate doses (mg/day) and weight gain (%)

**Supplementary Figure 3.** Scatter plot of the correlation between valproate doses (mg/day) and weight gain (%), excluding patients who received doses greater than 2000mg/day (N=22, 10% of the cohort)
